

BALA PRAMITHRAN R

Chennai, TamilNadu | pramithran2005@gmail.com | [Linkedin](#) | [Github](#)

CAREER OBJECTIVE

Pre-final year B.E. Computer Science student with strong fundamentals in core engineering concepts, who delivered a production-grade project solution for Ashok Leyland and serves as Lead of the college's largest technical community, Coders Forum. Adept at rapidly mastering new technologies to design and implement robust, high-performance systems.

EDUCATION

Panimalar Engineering College, Chennai

Sep 2023 - Jul 2027

- Bachelor of Engineering in Computer Science and Engineering (CSE)

Velammal Vidhyashram CBSE Surapet, Chennai

- Higher Secondary Education (HSE) – CBSE, 2023, Percentage: [72.6%]
- Secondary School Education (SSLC) – CBSE, 2021, Percentage: [92.6%]

TECHNICAL SKILLS

- Languages:** Java, Python, SQL
- Frameworks & Libraries:** OpenCV, FastAPI, PyTorch, scikit-learn, Colmap, Open3D, Pandas, Numpy
- Tools & Platforms:** Git, GitHub, Kaggle, Docker, Android Studio, Linux, Ui-Path, N8N
- Operating Systems:** Linux(Fedora, Ubuntu), Windows

PROJECTS

Engine Defect Detection System for Identifying and Analyzing Anomalies

Aug 2024 - Oct 2025

(Ashok Leyland) | **Open3d, PyTorch, scikit-learn, PYQT**

- Developed a **Python-based 3D engine defect detection system** to identify minute flaws in engine block models using point cloud analysis and geometry processing.
- Implemented **Open3D and DBSCAN clustering** to improve defect localization accuracy and separate structural anomalies from noise.

3D Model Reconstruction

Jan 2025 - Mar 2025

(Personal Project) | **Open3d, OpenCV, Colmap, Numpy**

- Developed a **Python-based pipeline to reconstruct 3D models from 2D image datasets**, processing and aligning 100+ images per model to generate accurate, textured outputs.
- Automated key stages of the reconstruction workflow**, significantly reducing manual preprocessing effort and improving consistency across models.

EXPERIENCE

Project Internship – Infosys

Nov 2024 - Feb 2025

- Built a **full-stack web application** using **Angular + TypeScript** for the frontend and **Flask** for the backend, implementing complete end-to-end functionality
- Integrated **Cloudinary** for cloud-based media **storage** and **retrieval**, enabling efficient handling of user-uploaded files

LEAD - Coders Forum

Mar 2025 - Present

(Technical Community)

- Leading the college's largest technical community, Coders Forum**, focused on gathering, sharing knowledge, and connecting like-minded peers.
- Organizing **weekly meetups** and **monthly coding contests** to encourage collaborative learning and problem-solving.

ACHIEVEMENTS

Winner, Hack-A-Bot (Ui-Path) | Oct 2024 (secured 1st place of 50 teams)

- Designed and deployed an **automated email system Bot** that manages replies, organizes communication, and supports native-language responses via translation.

Runner-Up, Hack-A-Choice | Feb 2026

- Designed and implemented **ParkFlow**, a SaaS-based parking management platform featuring role-based modules for administrators and users.

SOFT SKILLS

Leadership, Team Management, Organizing, Communication, Collaboration, Problem Solving, Time Management
